MAIN PROJECTS

E-COMMERCE

August, 2023

[see project](#)

Collaborative development of an online store for technological products.

- I implemented functional solutions that increased the project's utility.
- I actively contributed to the team by implementing key features and solving technical issues.
- I used React.js to create a dynamic and appealing interface, CSS with the BEM methodology for consistent styling, Axios for communication with API's, and React-bootstrap to enhance the user experience.

POKÉDEX

July, 2023

[see project](#)

Development of a responsive web platform for user management.

- I used React.js to create a user-friendly interface, HTML and CSS for structure and styling.
- I demonstrated autonomy in making technical decisions and skills in solving challenges.
- I successfully implemented the interaction between CRUD methods and communication with API's using Axios.
